PREFACE

The Australian Standard Commodity Classification (ASCC) has been developed by the ABS to facilitate the compilation of comparable Australian production, import and export commodity statistics, to improve the comparability of Australian production commodity statistics with equivalent commodity statistics of other countries (compiled in accordance with international standard commodity classification) and to provide a framework for the integration and standardisation of Australian commodity statistics generally.

Part 1 of the ASCC includes the introduction, broad structure of the ASCC, summary classification and commodity keys linking production and overseas trade items to standard (ASCC) items.

This part (Part 2), includes the detailed classification which lists the standard (ASCC) items under the industry of origin headings which constitute the broad structure of the ASCC and shows, for each ASCC item, its component (or corresponding) production, import and export items. (For detailed information on the principles and structure of the classification and the standard commodity items it includes, reference should be made to the Introduction included in Part 1.)

ASIC Industry of Origin: DIVISION C : MANUFACTURING - contd
CLASS 2349 : TEXTILE FINISHING

Note: This ASIC industry of origin has been created separately with only one ASCC item listed under it because:

- (i) separate, specific information is not available on the majority of the commodities which originate only from industry class 2349, thereby preventing the creation of meaningful and viable standard items for these commodities;
- (ii) the ASCC, at present, relates only to transportable goods, and a large proportion of the activities primary to this industry is involved in the provision of services (e.g. bleaching, dyeing, printing, pleating or other finishing of textiles);
- (iii) the creation of this separate industry of origin category permits the presentation of standardised commodity items for the other important textile industry classes.

ASIC Industry of Origin: DIVISION C : MANUFACTURING - contd
CLASS 3164 : METAL COATING AND FINISHING

Note: This ASIC industry of origin has been created separately with no ASCC items listed under it because:

- (i) separate, specific, information is not available on the commodities which originate only from industry class 3164 thereby preventing the creation of meaningful and viable standard items for these commodities;
- (ii) the ASCC, at present, relates only to transportable goods, and a major proportion of the activities primary to this industry is involved in the provision of services (e.g. engraving, polishing, plating and heat treatment of metals);
- (iii) the creation of this separate industry of origin category permits the presentation of standardised commodity items for the other important metal industry classes.

ASIC Industry of Origin: **DIVISION C : MANUFACTURING - contd**
CLASS 3165 : NON-FERROUS STEAM, GAS AND WATER FITTINGS

Note: Excluded from the ASCC items shown under this ASIC industry of origin are aerosol valves, which are primary to this ASIC industry.
 Aerosol valves are included in ASCC item 3169.70.
